(54) Title: TROLLEY DEVICE

(57) Abstract: A trolley device capable of lifting and moving an open topped container, comprising a body part having handle means and means which permit movement of the device along a surface, the body part having primary container-contactable means including at least one container-contactable part located above ground level when said body part is upright which can engage a lower external side of such a container, and secondary container contactable means including at least one container-contactable part spaced above the said primary contacting means when said body part is upright and which can engage an upper internal side of the container, said body part capable of pivoting about the said means which permit movement to raise both said container-contactable means.
